To Whom it May Concern:

HMS Architects has worked with CDW Services as a contracting partner for the completion of the Isaac Delgado Hall Auditorium Renovations at Delgado Community College's City Park Campus. I would highly recommend their services based on my understanding of their ability to overcome significant construction challenges.

CDW was able to complete the demolition and renovation of the existing theater in the middle of Delgado's campus in an occupied building while minimizing disruption to the faculty and students. Careful coordination was ensured with the owners and adjacent users to minimize disruption of classes and exams. The work included complex tie-ins to the existing active building systems including chilled-water, power, emergency generator, fire alarm and sprinkler systems. The work also included theater specific disciplines including motorized rigging, audio and visual systems and theatrical lighting which required coordination with the traditional building trades.

The result of CDW's work is an exceptional 350-seat theater in the heart of the historic Isaac Delgado Hall on City Park Avenue.

CDW Services was an excellent partner in this project. I look forward to working with CDW Services on future construction projects and would recommend their services.

Respectfully submitted,

HMS Architects APC
